

POST SHOW RELEASE

PL ST EXPO UA

INTERNATIONAL TRADE FAIR
FOR PROCESSING POLYMERS

MAY 26-28, 2026
Ukraine, Kyiv

The only polymer processing exhibition in Ukraine

KYIV GLOBAL EXPO once again gathers industry leaders, as the path to victory relies on a strong business sector and powerful Armed Forces of Ukraine.

Broken supply chains, the search for new equipment, and modernization — we understand the challenges confronting Ukrainian enterprises. Our exhibitions serve as the precise lever to restart manufacturing, bring partners together, and give impetus to restoration. Winning together!

The 17th International Exhibition PLAST EXPO UA '2026 took place at the International Exhibition Centre from May 26 to 28, 2026.

Traditionally, the event took place alongside the **INTERNATIONAL INDUSTRIAL FORUM** and several other exhibitions:

- **ADDIT EXPO UA**
- **EXPERT SECURITY**
- **PROTECTION TECHNOLOGIES/FIRETECH**
- **GREEN ENERTECH**

The entire large community of our exhibitions — organizers, businesses and guests — expresses its gratitude to the Armed Forces of Ukraine for the opportunity to meet, plan, and restore Ukraine. While you are driving the enemy out of our land, we are rebuilding it in the rear. Glory to our Heroes!

The only polymer processing exhibition in Ukraine

KYIV GLOBAL EXPO PROJECTS ARE MORE THAN JUST TRADE SHOWS.

It is the ultimate platform for industrial growth. By co-locating Plast Expo UA, Promforum, Addit Expo 3D, Expert Security, Protection Technologies/FireTech, and our new energy-focused initiative GReen Enertech, we have built a unique industrial hub.

We broke down the barriers between different sectors to showcase what matters most: industrial tech, security, and energy are not isolated fields, but an interconnected chain driving the resilience and growth of Ukrainian business today.

EXHIBITOR REVIEWS: PLAST EXPO UA '2026

Ukrainian industry is alive and well!

This is exactly the conclusion every visitor to Plast Expo UA and the Industrial Forum could draw. Hundreds of participating companies, thousands of engaged visitors, and countless pieces of industrial equipment.

Ukrainian manufacturing is operating and evolving—unique machinery is being launched, and robotics are being actively integrated.

We are proud to be part of these incredibly important processes that make Ukraine stronger, both economically, in terms of independence, and in the field of defense capability.

Thank you to the organizers for their colossal work and for bringing together such a truly large audience of visitors!

We work, we manufacture, we develop in Ukraine!

AMMOLIT PLUS

AMMOLIT PLUS at Plast Expo 2026

This year's exhibition has grown even larger: more exhibitors, more visitors, and a heightened live interest in Ukrainian manufacturing, engineering, and cutting-edge technological solutions.

For us, participating in the exhibition is more than just an opportunity to showcase our company. Above all, it is a live dialogue with businesses, manufacturers, designers, and teams searching for a reliable partner to handle complex production tasks.

AMMOLIT PLUS is open to projects that require true expertise, not just a standard service.

We bring extensive experience in polymer product manufacturing, mold design, plastic injection molding, engineering support, and full-cycle production—from initial concept to the finished product. We also own several proprietary brands, such as AMM, BORIKA, BORIKA FASTen, alongside dozens of private labels.

Thank you to everyone who visited our booth, asked questions, shared ideas, and discussed future cooperation opportunities.

AMMOLIT PLUS — creating solutions for your perfect product.

PLAST EXPO UA 2026 has successfully concluded this year.

It was an exceptionally productive exhibition, drawing over 13,000 unique visitors over three days and featuring more than 350 exhibitors from Ukraine and around the world.

These three days were packed with innovation, discussions on recycling, and presentations of new materials and solutions for the plastics processing industry.

KVOTA Company was delighted to meet with our long-term partners and clients, as well as to discuss collaboration opportunities with new companies.

We showcased a wide range of products for mold and die manufacturers, including solutions from Proplastica, KNARR, WADIMPLAST, Elwik, Bordignon, GC-heat, CUMSA, and AHP MERKLE, alongside mold and equipment maintenance lubricants from ORAPI and Ambersil.

Once again, the exhibition has solidified its status as the premier platform for industry professionals, where new trends are shaped and promising partnerships are born.

PLAST EXPO UA '2026 VISITOR STATISTICS

VISITOR INTERESTS BY CATEGORY

- Technologies and equipment for polymer production and processing
- Thermoforming equipment
- Foam production and thermoset processing machinery
- Ancillary equipment
- Polymer waste recycling equipment
- Raw and auxiliary materials
- Polymer and composite materials
- Engineering plastics
- Chemical fibers and filaments

VISITORS BY INDUSTRY SECTOR

- Polymer processing and plastic products
- Construction & Civil Engineering
- Chemical industry
- Food industry
- Mechanical and electrical engineering
- Packaging and advertising industry
- Housing and communal services
- Furniture industry
- Pharmaceuticals and cosmetics
- Medicine and prosthetics
- Agriculture

BUSINESS PROGRAM

On May 27, 2026, the SEMINAR "POLYOLEFINS MARKET OF UKRAINE: THE IMPACT OF MACROECONOMIC CHALLENGES" took place.

The event was dedicated to analyzing the current state of the polyolefins market in Ukraine and globally amid escalating global macroeconomic and geopolitical risks. Speakers and participants paid special attention to the resilience of supply chains and raw material pricing.

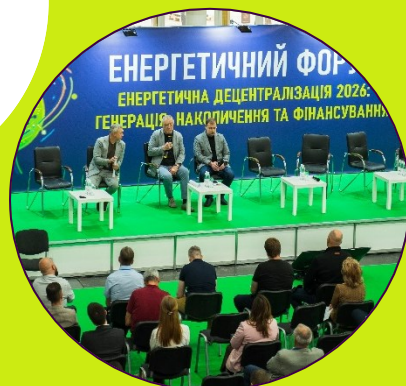

As part of the co-located exhibitions, 13 business events were held, focusing on the following key areas:

1. Post-war recovery and state support: attracting investments, industrial modernization, financing under the "Made in Ukraine" program, and the "Industrial Ramstein" initiative.

2. Cutting-edge technologies and digitalization: implementation of 3D metal printing, non-destructive testing methods, integration into European digital hubs, and dual-use supply chains.

3. Development of core industries: modernization of foundry production, analysis of paint, coating, and polymer markets, and promotion of modern welding technologies.

4. Safety, ecology, and European integration: civil defense and fire safety of enterprises, preparing businesses for new climate standards and environmental requirements.
